## Machine learning

Lecture 10
Quality Assurance Legostones

Prof. Dr.-Ing. Jan Schmitt

E-mail: jan.schmitt@fhws.de

### The course objectives

| #  | Date       | Topic  | Lecturer                  |
|----|------------|--|---------------------------|
| 1  | 17.03.2021 | Introduction                                   | All                       |
| 2  | 24.03.2021 | Data visualization and preprocessing (Titanic) | Prof. Schmitt             |
| 3  | 31.03.2021 | Getting to know Machine Learning               | Prof. Schmitt             |
| 4  | 07.04.2021 | Linear / Multiple Regression                   | Prof. Ceballos-Cancino    |
| 5  | 14.04.2021 | Logistic Regression                            | Prof. Engelmann           |
| 6  | 21.04.2021 | <del>Decision Trees</del>                      | Prof. Ceballos-Cancino    |
| 7  | 28.04.2021 | Neural Networks                                | Prof. Engelmann           |
| 8  | 05.05.2021 | Time Series Forecasting                        | Prof. Batres              |
| 9  | 12.05.2021 | Time Series Forecasting                        | Prof. Ceballos-Cancino    |
| 10 | 19.05.2021 | Quality Assurance Legostones                   | Prof. Schmitt             |
| 11 | 26.05.2021 | Changeover Prediction                          | Prof. Schmitt / Engelmann |
| 12 | 02.06.2021 | Poster Session                                 | All                       |

We meet via ZOOM – the link is permanently the same and posted in the eLearning announcement

### It's a Machine Learning Tour

virtual onboarding

FH<sub>'</sub>W-S

#### FH<sub>'</sub>W-S

our starts

ty to survive

#### FH<sub>'</sub>W-S

12. International Machine Learning Expert!

4. To be ill on tour is never a good idea

5. Will you pass the portfolio examination?

10. We have to build bridges not walls!

e of our cruise is running out!

cking away! 8. Tin

7. Out next track is travelled by ... ?

6. Oh no, an illness again

### Grading

|                                    | Digital badge | Course grading |          |
|------------------------------------|---------------|----------------|----------|
| Ice breaker                        | 20            |                | <b>√</b> |
| Quiz 1 – Fundamental understanding |               | 25             | <b>\</b> |
| Paper – COVID19                    | 30            | 12,5           | <b>\</b> |
| Quiz 2 – Deeper understanding      |               | 25             | <b>√</b> |
| Paper – Akahappa                   | 30            | 12,5           | <b>√</b> |
| Poster session                     | 20            | 25             |          |
| Total                              | 100           | 100            |          |

#### Agenda

- General course evaluation / vLab performance evaluation
- The CRISP-DM Model again
- Use-Case
  - Fundamentals of production KPIs
  - Interpretation of dataset
- ML-Model
- Practical session
- Results & Discussion

#### General course evaluation

Link: <a href="https://cloud6.evasys.de/fhws/online/">https://cloud6.evasys.de/fhws/online/</a>

**Passwort: WKRAF** 

Fill it, please

- 10 min.

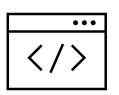

#### vLab performance evaluation

- Please find in CANVAS Module 10 the vLab performance evaluation
- Fill it, please!
- 5 min.

### Learning objectives

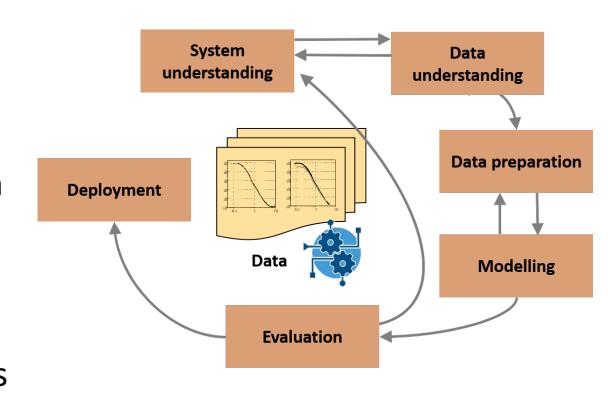

- In the previous lectures you learn primarily
  - Handling data
  - Single ML techniques and apply them to a dataset
- In the remaining 2 lectures we try to solve an Industry 4.0 issue with real production data
  - Using the CRISP-DM model and discover the task step by step
  - Discuss the relevance of ML in Industry 4.0

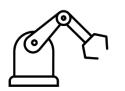

#### The CRISP-DM Model

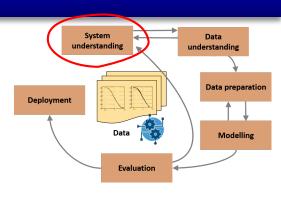

# Cross Industry Standard Process for Data Mining CRISP-DM

- Standard model for with six different process phases for DM problems
- CRISP-DM is application-neutral and can be used in any areas
- Established worldwide
- One of the most frequently used models in this (data) environment

The product - Lego Brickstone

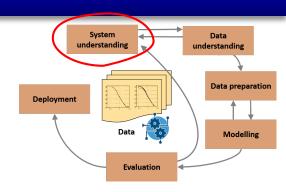

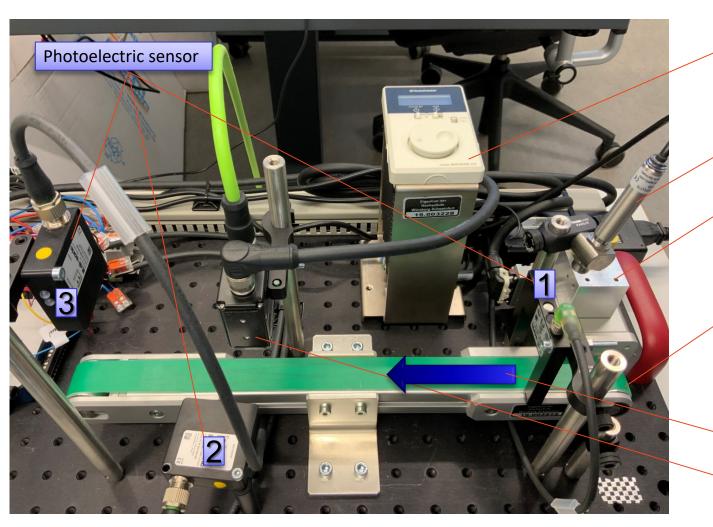

Product features (name some in the chat !)

- Production features (name some in the chat!)

### QA as a part of the production system

Frequency converter

Infrared temperature sensor

Acceleration sensor

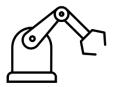

Conveyor belt

Direction of motion

Industrial camera

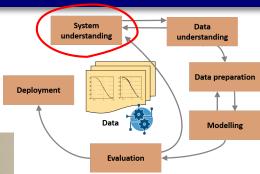

<u>Purpose:</u>

Quality Assurance of Lego stones

### The test bench

### The functions of the production system components

#### Tweedback

| Component                                   | Function | Remarks |
|---|----------|---------|
| Conveyor belt                               |          |         |
| Freqency converter                          |          |         |
| Infrared temperature sensor                 |          |         |
| Acceleration sensor                         |          |         |
| Industrial camera                           |          |         |
| Photoelectric sensor 1 = fork light barrier |          |         |
| Photoelectric sensor 2  2  0 0 0            |          |         |
| Photoelectric sensor 3   3 C   © © © ©      |          |         |

#### Our use case

#### The scenario

#### Prof. Engelmann: Plant manager

- We have a lot of trouble with our automated quality assurance line
- The OEE KPI is a catastrophe!
- We have a lot of downtime
- Solve the problem, <u>Now</u>!
- We need to know what is our major issue.

#### You: data scientist

– OE... KP...What...?

#### Our Use Case - Excursion

#### Fundamentals of production control

The OEE – Overall Equipment Effectiveness

$$OEE = Availability \cdot Effectiveness \cdot Quality rate$$

Availability:

Availability = 
$$\frac{APT}{PBT}$$

Effectiveness

$$Effectiveness = \frac{PRI \cdot PQ}{APT}$$

Quality rate

Quality Rate = 
$$\frac{GQ}{PQ}$$

#### Our Use Case - Excursion

Overall Equipment Effectiveness (OEE) factors combined with loss types and possible causes of loss

| OEE Factor                      | Loss type   | Cause of loss |
|---------------------------------|---|---------------|
| Availability.                   | <ul> <li>Equipment failure</li> </ul>   |               |
| <ul><li>Availability:</li></ul> | <ul><li>Setup &amp; adjustment</li></ul>  |               |
| <ul><li>Effectiveness</li></ul> | <ul><li>Idling &amp; minor stoppages</li></ul>  |               |
|                                 | <ul> <li>Equipment failure</li> <li>Setup &amp; adjustment</li> <li>Idling &amp; minor stoppages</li> </ul> |               |
| <ul><li>Quality rate</li></ul>  | <ul> <li>Quality deviations</li> </ul>  |               |
|                                 | <ul> <li>Deviations from product changeover</li> </ul>  |               |

#### Our use case

#### The scenario

#### Prof. Engelmann: Plant manager

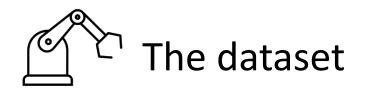

- We have a lot of trouble with our automated quality
   assurance line
- The OEE is a catastrophe!
- We have a lot of downtime
- Solve the problem, <u>Now</u>!
- We need to know what is our major issue/failure class.

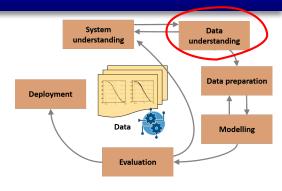

#### You: data scientist

- OK, I know the system and OEE
- Let me have a
   look at the data

Row: Dataset for each product P1 with many features (cycle\_time, duration\_cam...)

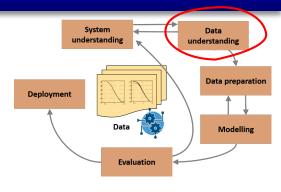

|   | cycle_time | duration_cam | duration_end | wait     | fork_light_barrier | acc_sensor | motor_temp | Lego_check | width_Lego | length_Lego | horizontal_distance | vertical_distance |
|---|------------|--------------|--------------|----------|--------------------|------------|------------|------------|------------|-------------|---------------------|-------------------|
|   | 00:00:02   | 00:00:02     | 00:00:00     | 00:05:39 | 1                  | 2.6416     | 28.5206    | 1          | 164.23     | 246.44      | -0.032533           | -0.389930         |
| 1 | 00:00:02   | 00:00:02     | 00:00:00     | 00:07:05 | 1                  | 2.6519     | 26.7138    | 1          | 163.77     | 246.32      | -0.033498           | -0.367090         |
| 2 | 00:00:02   | 00:00:01     | 00:00:01     | 00:00:03 | 1                  | 2.6487     | 24.1249    | 1          | 163.53     | 246.42      | -0.038323           | -0.366120         |
| 3 | 00:00:07   | 00:00:07     | 00:00:00     | 00:00:03 | 1                  | 2.6484     | 28.7740    | 1          | 163.35     | 246.28      | 0.025371            | -0.016770         |
| 4 | 00:00:02   | 00:00:01     | 00:00:01     | 00:00:03 | 1                  | 2.6513     | 27.0664    | 1          | 163.36     | 246.68      | 0.021510            | -0.024169         |

*n* = 7757 datasets

Maybe we can train a Machine Learning model, which is feasible to evaluate the major issues in our production line automatically?

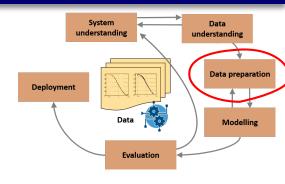

|   | cycle_time | duration_cam | duration_end | wait     | fork_light_barrier | acc_sensor | motor_temp | Lego_check | width_Lego | length_Lego | horizontal_distance | vertical_distance |  |
|---|------------|--------------|--------------|----------|--------------------|------------|------------|------------|------------|-------------|---------------------|-------------------|--|
| 0 | 00:00:02   | 00:00:02     | 00:00:00     | 00:05:39 | 1                  | 2.6416     | 28.5206    | 1          | 164.23     | 246.44      | -0.032533           | -0.389930         |  |
| 1 | 00:00:02   | 00:00:02     | 00:00:00     | 00:07:05 | 1                  | 2.6519     | 26.7138    | 1          | 163.77     | 246.32      | -0.033498           | -0.367090         |  |
| 2 | 00:00:02   | 00:00:01     | 00:00:01     | 00:00:03 | 1                  | 2.6487     | 24.1249    | 1          | 163.53     | 246.42      | -0.038323           | -0.366120         |  |
| 3 | 00:00:07   | 00:00:07     | 00:00:00     | 00:00:03 | 1                  | 2.6484     | 28.7740    | 1          | 163.35     | 246.28      | 0.025371            | -0.016770         |  |
| 4 | 00:00:02   | 00:00:01     | 00:00:01     | 00:00:03 | 1                  | 2.6513     | 27.0664    | 1          | 163,36     | 246.68      | 0.021510            | -0.024169         |  |
|   | ••••       |              |              |          |                    |            |            |            |            |             |                     |                   |  |

Maybe we can label each dataset with a failure mode or normal production mode

Failure mode XX

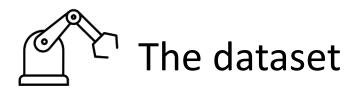

Our maintenance department label failure classes (1, 2, 3, 4, 6, 7, 8) and the normal production mode (5) in the data set

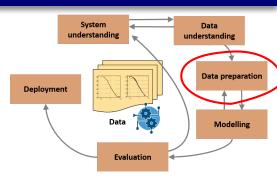

- 'Blocked\_Lego': 1
- 'Fallen\_Lego': 2
- 'Machine\_Downtime\_Long': 3
- 'Machine\_Downtime\_Short': 4

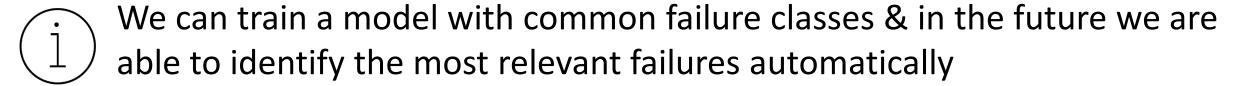

- 'Normalfall': 5
- 'Reduced\_Motorspeed': 6
- 'Unplanned\_Maintenance': 7
- 'Waiting\_Time': 8

Now, we can train a model with common failure classes & in the future we are able to identify the most relevant failures automatically.

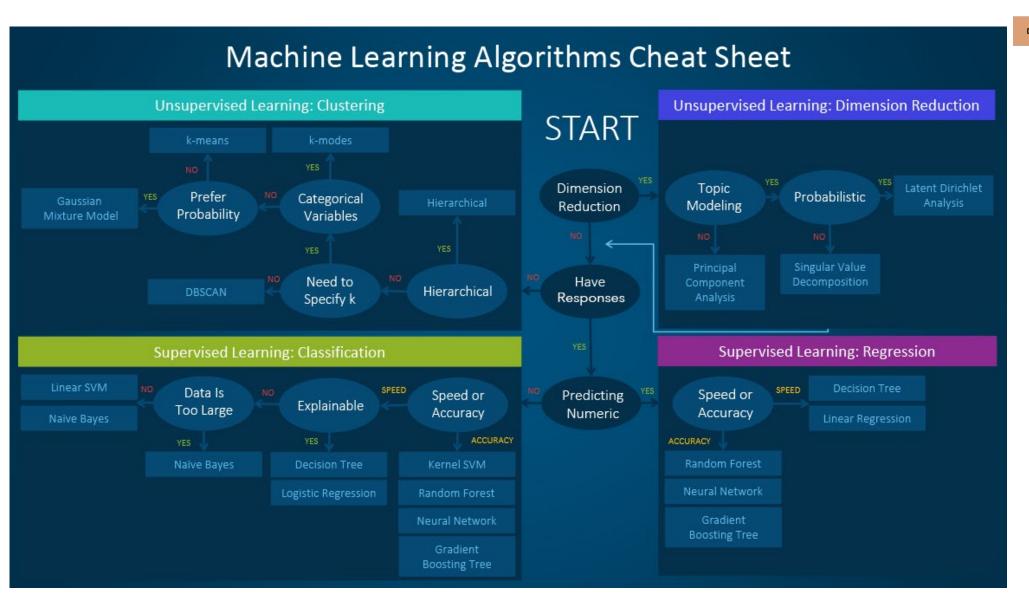

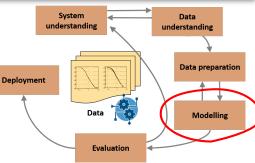

|   | cycle_time | duration_cam | duration_end | wait     | fork_light_barrier | acc_sensor | motor_temp | Lego_check | width_Lego | length_Lego | horizontal_distance | vertical_distance | failure_class |
|---|------------|--------------|--------------|----------|--------------------|------------|------------|------------|------------|-------------|---------------------|-------------------|---------------|
| 0 | 00:00:02   | 00:00:02     | 00:00:00     | 00:05:39 | 1                  | 2.6416     | 28.5206    | 1          | 164.23     | 246.44      | -0.032533           | -0.389930         | 7             |
| 1 | 00:00:02   | 00:00:02     | 00:00:00     | 00:07:05 | 1                  | 2.6519     | 26.7138    | 1          | 163.77     | 246.32      | -0.033498           | -0.367090         | 7             |
| 2 | 00:00:02   | 00:00:01     | 00:00:01     | 00:00:03 | 1                  | 2.6487     | 24.1249    | 1          | 163.53     | 246.42      | -0.038323           | -0.366120         | 5             |
| 3 | 00:00:07   | 00:00:07     | 00:00:00     | 00:00:03 | 1                  | 2.6484     | 28.7740    | 1          | 163.35     | 246.28      | 0.025371            | -0.016770         | 1             |
| 4 | 00:00:02   | 00:00:01     | 00:00:01     | 00:00:03 | 1                  | 2.6513     | 27.0664    | 1          | 163.36     | 246.68      | 0.021510            | -0.024169         | 5             |

Which model can be used?

#### Our Use Case – cheat sheet
